

Tech Tip #72 – idocVAULT Security

*****These settings and features may not be available for all clients. If you do not see them, please contact your solution provider.*****

If you are using the **in-house installation of eDOC Innovation's idocVAULT** to access saved documents, the following is an important notice to ensure best security practices:

iDOCVault can support both HTTP and HTTPS connections. In fact, we recommend implementing HTTPS if you have not already done so to ensure enhanced security on the internal network.

Your credit union will first need to purchase and install the SSL certificate, followed by pushing the change through to idocVAULT with assistance from a member of the eDOC Client Development Team.

Note: It may also be necessary to make changes in other core systems that request documents from idocVAULT via an API.

Much of this can be facilitated by our team through a professional service. If you are interested in enhancing your idocVAULT security or have any questions about this process, please reach out to our Client Development Team [here](#).
