

Tech Tip #56 Text Messaging With a Local Area Code

*****These settings and features may not be available for all clients. If you do not see them, please contact your solution provider.*****

One of the new features in eDOCSignature is the ability to send your members a text message notification when a new package needs to be signed. This allows your members to use their smart phones to fully read and sign the packages you send them. Did you also know that you can choose a **local area code** number when sending the text message? This helps your members avoid the anxiety one may feel when receiving a text message from an unfamiliar number.

For more information on the text message notification feature, please reach out to our [Sales Team](#).
